

BINGHAMTON UNIVERSITY'S NEW STUDENT HOUSING- PHASE II

Market Sector: Education
Project: New Student Housing- Phase II
Location: Binghamton, New York
Owner: Binghamton University
CM/GC: LeChase Construction Services
Contract Type: Subcontract
Tonnage: 1,700

Kinsley Manufacturing was subcontracted to Stewart Amos to install the 1,700 tons of structural steel and 2,400 concrete planks on the second phase of Binghamton University's East Campus housing project. Phase Two consisted of the construction of three new buildings, each of which is six stories in height and can house 400 students.

In addition to the erection of the buildings, our fabrication facilities helped Stewart Amos to supplement their fabrication due to the fast pace of the schedule.

At our peak on this project, the job was staffed with 3 foreman, 35 iron workers, 2 crawler cranes, a quality control inspector, a full-time project manager and a crew installing enclosures for temporary heating.
